

ICD-10-CA/CCI CLASSIFICATION PRIMER, FIFTH EDITION

By Joy Fletcher
ISBN 978-0-9734586-2-6

This textbook focuses on the application of ICD-10-CA and CCI to classification in the acute care hospital environment. It contains 30 chapters. Chapters 1 to 4 provide an introduction to the coding process and to the classification systems. Chapters 5 to 30 are organized by body system or certain circumstances. These chapters examine the common conditions relative to each body system or circumstance and include:

- specific coding implications
- related pathophysiology
- information about typical health care interventions.

Each chapter contains exercises designed to reinforce key concepts. Answers to the exercises are provided to encourage self assessment and problem solving.

The 5th Edition reflects the changes for v2009 ICD-10-CA/CCI and the Canadian Coding Standards for version 2009 ICD-10-CA/CCI; updates to pathophysiology, medical practice and intervention. While this book is primarily written for those new to health care classification, it can be used by more seasoned clinical coders to:

- update and refresh classification skills, particularly for those who have had a sabbatical in professional practice as a clinical coder.
- serve as a reference for clinical coders, data analysts, physicians, and other end users.
- encourage an open dialogue about coding practice and promote quality and consistency in data classification.
